

“ADaM covers a whole range of different scenarios and proves to our auditors that we are on top of the issues.”

Head of MIS, Worcester College of Technology

ADaM

“ADaM protects your reputation and bottom-line both quickly and easily at minimal cost. There really are no excuses!”

Nick Linford
Managing Director

ADaM in context

- Both inspectors and auditors are being instructed to scrutinise all in-year changes to ILR data to identify any data management practices which have the effect of artificially inflating success rates. Failure to address such issues may trigger sanctions and impact negatively on future inspection grades.
- In-year data changes are also often an indication of poor data management processes - for example, in respect of initial course set up. Such problems often create significant amounts of additional work for MIS staff at a time when resources are already stretched.

Key benefits to you ...

- Areas of potential concern can be highlighted and addressed internally before being raised by either inspectors or auditors.
- Potential reductions in inspection grades (particularly in respect of Leadership and Management) may be averted.
- Wasted time spent by MIS staff can be significantly reduced.
- Data accuracy and timeliness can be significantly improved.

ADaM in brief

- Instantly assesses a wide range of areas of potential concern.
- Can summarise each issue by learning aim to ensure that further investigation and any remedial action is targeted to where it is most needed.
- Compares any 2 in-year ILRs from the last 3 years.
- Simple to use wizard interface, requiring no specialist skills or knowledge.
- Provides information in a range of formats including PDF and Microsoft Excel plus a Microsoft Access database enabling further customised analyses.

Protect your reputation

Don't wait for auditors or inspectors to ask the awkward questions.
